ACCESSION NUMBER: 1999:56400 USPATFULL
 TITLE: Method for localization and quantitation of a substance
 in a biological sample
 INVENTOR(S): Roth, Kevin A., St. Louis, MO, United States
 Lorenz, Robinna, St. Louis, MO, United States
 PATENT ASSIGNEE(S): Washington University, St. Louis, MO, United States
 (U.S. corporation)

	NUMBER	KIND	DATE
PATENT INFORMATION:	US 5902727		19990511
APPLICATION INFO.:	US 1996-707799		19960904 (8)
DOCUMENT TYPE:	Utility		
FILE SEGMENT:	Granted		
PRIMARY EXAMINER:	Wortman, Donna C.		
LEGAL REPRESENTATIVE:	Howell & Haferkamp, L.C.		
NUMBER OF CLAIMS:	7		
EXEMPLARY CLAIM:	1		
NUMBER OF DRAWINGS:	14 Drawing Figure(s); 8 Drawing Page(s)		
LINE COUNT:	901		

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A method for localizing and quantitating a target substance in a biological sample is disclosed. The method utilizes an enzyme-linked probe that binds to the target substance and generates a depositable chromogenic or fluorogenic substance which detects position and a soluble chromogenic or fluorogenic substance which allows quantitation in the medium bathing the sample.

DETD . . . for signal amplification is described in U.S. Pat. No. 5,196,306 and the corresponding commercial kit form known as the biotin **tyramide** signal amplification (TSA, New England Nuclear Life Science Products, Boston, Mass.) method. The method utilizes an enzyme-linked antibody that binds. . .

DETD . . . can be terminated by removal of the solution phase from the enzyme or by addition of acids, bases, reducing agents, **chaotropic** agents or the like to a sample of the solution phase first removed from the enzyme. A chromogenic or fluorogenic. . .

DETD . . . boiling. In addition, surface sites unrelated to the target substance can sometimes also bind the probe nonspecifically. To reduce this **nonspecific binding**, the sample can be coated with a solution which contains a reagent which binds to and masks or generally blocks such **nonspecific binding** sites. Some such masking or blocking agents include gelatin, bovine serum albumin, powdered milk and some detergents.
